Trailer Camera Set Digital with Monitor 7.0"

The digital wireless camera system for trailers, transport and shed

The Trailer Camera for anyone who wants to keep an eye on everything on their 7" screen. The high-quality, wide-angle Camera supplies razor-sharp images from the trailer to the screen. A powerful package for monitoring animals in the trailer while they're being transported.

Camera • CMOS image sensor (510 x 492 pixels) • 100° angle of view • minimal exposure 2 lux / F1.2 & 0 lux (IR on) • 5 volt DC • charging time: 4 hours • up to 4 hours in standby (IR off) / up to 3 hours (IR on) • visibility up to 100 m (depending on situation) • night vision range 5 m • dimensions (W x D x H) 28 x 90 x 28 mm (without mounting) • weight 205 g • working temperature: -20°C ~ +60°C • IP65 water and dust protection

Monitor • digital LCD screen with 7.0" • resolution 800 x 480 pixels (RGB) • with rear view camera (mirror display / up-down view / distance display) • 2 channels for up to 2 cameras • 11 - 32 volt DC • dimensions (W x D x H) 185 x 50 x 123 mm • weight 380 g

Supplied package
2.4 GHz camera with magnetic foot (IP65)
7.0" wireless monitor 2-canal 2.4 GHz
Charge cable 12 V DC for cigarette lighter
Car holder for monitor
Fixed connection cable for camera 12 V

ColostroStart

Colostrum management

The feeding of calves during the first days of life or even immediately after birth is crucial for their further development. First milk, also known as colostrum, has a higher percentage of immunoglobulins and nutrients compared to normal cow's milk. Consequently, the new-born calf needs to take in higher quantities of the high-quality colostrum straight away. It is recommended that a colostrum store be created with frozen colostrum. This means that there is always a stock of high-quality first milk available. If the quality of the colostrum after birth is poor (e.g. in heifers) or the amount produced is too low, frozen colostrum can be used instead.

Colostrum management - ColostroStart
The products in our ColostroStart Colostrum Management System are the best way to help you to provide your new-born calves with colostrum. The aluminium pouches (4 litres) are easy to fill and can be pasteurised (optional), frozen and reheated without any problems. To administer the colostrum, simply screw on the drinking teat or drencher probe.

We have put together retail sets geared towards your needs:
ColostroStartSET 10
• 10 colostrum bags • 1 teat • 1 drencher probe

ColostroStartSET 50
• 50 colostrum bags • 3 teats • 3 drencher probes

To make filling the pouches even easier, we offer you the ColostroFILLER filling tool. The optional ColostroCASE drinks trough bag keeps the first milk warm for longer, making feeding easier.

Here's how it work:

Milk warmer tank 50 l

Milk warmer

Specialist literature and studies indicate that the feeding of young calves has a marked effect on animal health, development and therefore the later performance of the animal. To achieve positive results, an in-depth knowledge on the part of the farmer and technical equipment are usually required. Our milk warmer provides the ideal support for calf rearing, especially for medium-sized businesses. It closes the gap between immersion heaters and mobile milk tanks with sophisticated equipment. Quickly and without much effort, up to 50 litres of milk or milk substitute mixture can be heated up.

• made from food-grade stainless steel
• easy cleaning thanks to the lid which can be fully opened
• with volume scale inside the tank
• water bath: separate inlet and outlet, viewing window to check fill levels

• stepless thermostat
• pasteurisation possible
• 1" outlet with slider valve from the food industry
• with rod thermometer (food-safe)
• incl. lid
• support feet optionally available

Stirrer optionally available!
The powerful stirrer ensures the clump-free stirring of milk exchangers. By briefly switching the mixer on during the heating of fresh milk, the heating time can be shortened. The cover with integrated mixer can be easily placed on the

MilkPot 50 (Art. 141450) and screwed into position.

• 1,000 rpm • 370 W • ready to connect • with opening for thermometer (thermometer not included in the supplied package)

Ref. no. 141461 Cover with Stirrer

KERBL

Calzogol Bolus

Calcium bolus (milk fever)

Cows with optimum calcium supply have a better start to lactation, are healthier and produce more milk. • very high levels of fast and slow availability calcium (45 g) and vitamin D3 (40,000 I.E.) per bolus! • calcium sources with varying release rates supply the cow evenly with calcium • very well tolerated by membranes – no irritation of the mouth, esophagus and rumen • no caustic calcium chloride • easy application and economical – one bolus per dose is enough!

Feeding recommendation: Administer one bolus with the applicator as per the instructions when calving. If required, administer a second bolus approx. 12 hours after birth.

ref. no.	Weight / bolus	⊞	⬜	€
15980	175 g	4	1/8	

Dietary mineral feed for milk cows to lower the risk of milk fever.

Ket-o-Vital® Bolus

Energy Bolus (Ketosis)

Healthy cows become pregnant quicker and provide more milk. • bolus that works on various physiological levels – liver - rumen - immune system • The glucoplastic substances have a positive effect on energy metabolism. The risk of ketosis / acetonaemia decreases. Very high milk yield, birth problems, stress, heat and obesity at the time of birth are classical risk factors for ketosis • safe dosage and application The animals have more appetite, are fitter and recover faster

Feeding recommendation: Administer two boluses shortly after calving using a bolus applicator as per the instructions. If required, administer another bolus 12 hours after calving.

ref. no.	Weight / bolus	⊞	⬜	€
15982	135 g	4	1/8	

Dietary supplementary feed for milk cows to lower the risk of milk ketosis/acetonaemia.

Fertilgol Bolus

Beta Carotene Bolus (fertility)

A quick pregnancy shortens the calving interval and improves economic success. • for male and female breeding animals just before and during the covering or insemination period • supports a successful embryo transfer (recipient and donor animals) • the high beta carotene content aids the corpus luteum formation, colostrum quality, the oestrus cycle and sperm quality • a well-developed corpus luteum has a positive influence on the embryonic survival rate • easy and safe application through the even release of beta carotene, vitamins and trace elements over a period of min. 20 days • the release rate has been scientifically confirmed

Feeding recommendation:
Female cows: Administer the first bolus 30 days before insemination. Administer the second bolus shortly before or after insemination
Stud bulls: Administer one bolus every 20 - 30 days during breeding season. The bolus dissolves in 20 days in the rumen

ref. no.	Weight / bolus	⊞	⬜	€
15983	95 g	8	1/8	

Dietary mineral feed for cattle to support the preparation for oestrus and reproduction – long-term bolus

Vitalgol Bolus

Mineral Vitamin Bolus (Vitality)

Well-nourished animals have the best conditions for good growth, vitality and fertility • for male and female cattle • the long-term bolus releases vitamins and trace elements safely and evenly over a period of at least 90 days The release rate has been scientifically confirmed • a constant supply of essential vitamins and trace elements cannot be safely guaranteed with conventional feed, especially in pastures / hill farms / mountain farms. The solution is the Vitagol long-term bolus. • Individual animals in a herd can be targeted for a boost of vitamins and trace elements

Feeding recommendation:
Young cattle < 300 kg live weight: one bolus every 3 months, administer using a bolus applicator as per the instructions.
Cattle > 300 kg: two boluses every 3 months, administer using a bolus applicator as per the instructions.

Quality for feed

A Futter

Dietary mineral feed for cattle for the long-term supply of trace elements and vitamins to grazing animals — long-term bolus.

ref. no.	Weight / bolus	⊞	⬡	€
15981	110g	8	1/8	

Bufferlyt Bolus

Electrolyte bolus

Use for diarrhoea, lack of appetite and reluctance to drink • The calves are more stable and recover more quickly. • Sodium bicarbonate is a very effective buffer. The use of buffers helps to resist excess acidity. Excess acidity is often the reason why calves are weak and dull and have no desire to drink • Lost electrolytes are effectively replaced. This protects from the dehydration effects of diarrhoea, transport stress and heat • stress-free and safe administration Administration can also be done without an applicator. Simply place the bolus lengthways on the base of the tongue using your hand. The calf will swallow the bolus with no problems • applicator not included

Feeding recommendation: Immediately administer one bolus as per the instructions at the first signs of diarrhoea. Then administer one bolus after each liquid meal for 2 - 3 days.

Quality for feed

Kerbl milk filters

Our company has been producing both the sewn and thermally bonded milk filter socks using our own high-tech production machinery since 2017, in order to further optimise the product quality and to be able to react more flexibly to customer requests.

We also produce disc filters for cans under the Kerbl own-brand 'Sana', as well as milk filter socks. Sana has stood for the highest quality and reliability in milk filtration for decades and is also well-known far beyond the borders of Germany.

Sana Premium

Kerbl has also developed a premium version for the SANA brand, in order to meet the growing demands in milk production. Thanks to its optimised fibre distribution, the premium filter offers even higher tensile strength and finest filtration while still providing the necessary permeability for raw milk.
This makes the filter especially suitable for large amounts of milk and the highest standards.

More tensile strength through optimised fibre distribution and permeability.

Sana Premium Milk Filter

sewn

• sewn • for vacuum systems • high-quality, food-safe nonwoven fabric

Technobase 2CB New Formula

Technobase 2CB New Formula is the ultimate two-component adhesive for professional use in modern hoof care. The blue colouring immediately shows the correct mixture when squeezing.

The new formula has been optimised for the parameters of curing speed, viscosity and hardness after polymerisation in comparison with standard two-component adhesives.

• the adhesive becomes as hard as glass, optimally adhering to hoof and block • the liquidity of the adhesive mix has been designed to allow working at both 45 ° and 90 ° angles • the hoof can bear full weight again after approx. 2 minutes (if stored correctly over 15° C) • the high-quality 200 ml cartridge, which can be opened and closed again with just a few actions and no need for tools, guarantees maximum reliability in relation to hoof care • the correct attachment of the special mixing cannulas is made child's play thanks to the specific accepting bolts, ensuring the correct mixing ratio with minimum waste • bonds powerfully and permanently to wood and rubber blocks • even easier to use thanks to the easy-to-handle and recloseable cartridge

For anyone who does not want to use large cartridges due to the small amount of adhesive required, the single-use cartridges offer the ideal alternative with their content of 25 ml.
The 25 ml content is designed precisely for single-use applications. The matching mixing cannula is already integrated into the air-tight packaging!

Thermal Container HeatBox

The solution to problems using two-component adhesives for hoof care in winter!
HeatBox offers the perfect way to keep two cartridges at the correct temperature during use in stables, thanks to the critical temperature property of its chemistry.

Additional product properties:
• one heat chamber each for cartridges in the pistol and for spare cartridges (only fits Technobase 2CB dosing pistol item. no. 16284) • fits all common 200 ml cartridges such as Technobase 2CB
• constant temperature in the chamber of 20 °C thanks to integrated thermostat
• incl. metal bracket for attaching to the hoof stand or bar/tube • with vehicle plug and power pack for connection to a 230 V power supply • input: 12 V / 50/60 Hz

Hoof Shoe Tubbease™

Tubbease™ was developed in New Zealand with the aim to create a breathable treatment shoe for problem horse hooves (e.g. sole ulcers). The supplied Velcro tapes mean Tubbease™ is easy to attach to the horse's leg. Tubbease™ is available in three sizes.

The benefits of Tubbease™:
• air can escape upwards meaning no heat or humidity is trapped within the shoe • the rubber-coated base reliably prevents moisture from entering and simultaneously ensures that the treatment fluid remains on the hoof • the optimum climate within the shoe means the hoof retains its natural strength • the thick EVA insole reduces pressure pain for the horse (e.g. with sole ulcers) and extends the life of Tubbease™ • various remedies to treat abscesses, thrush, hoof injuries, hoof outbreaks etc. can be used with Tubbease™ • Tubbease™ design is protected (NZ 417646)

Aesculap Battery Clippers Bonum

The new cordless clippers from Aesculap, fitted with lithium-ion batteries and a sleek and ergonomic design. The Bonum is also a perfect fit for women's hands and boasts low weight, low noise and long battery life.

The Bonum is also fitted with an intelligent lithium-ion battery system. On the one hand, the battery technology protects the device from overheating and switches it off until it has cooled when the battery temperature reaches >50°C. On the other hand, the charger provides information on the battery status with two LED displays:

• extremely light, just 900 g incl. batter and shaving blade
• just 40 mm diameter and 12.5 cm in circumference in the grip area, therefore also great for small hands
• volume / frequency pleasant for your horse
• very short and handy at 295 mm in length
• very well balanced
• powerful and long-lasting
• lithium technology so no memory effect
• battery from tool professionals
• electronic push button recessed in the housing means no more accidental switching the machine on or off when handling
• Aesculap shearing blades from the Made in Germany Econom series
• supplied package: Bonum clippers, 1 or 2 batteries, charger, blade set 23/31 tooth (GT505/GT502), instructions, oil, hard shell case

Available from March 2018!

Red LED battery indicator: Constant light = battery not being charged as temperature too high (above 50 ° C) / flashing = battery defective or foreign object between the charging contacts

Aesculap Battery-Operated Clipper Econom CL for Sheep

Aesculap is one of the first companies in the world to market a wireless sheep clipper. Aesculap used their expertise and engineering skills to thoroughly meet the special demands made on batteries when sheep shearing. The new sheep clipper does of course boast the prestigious Aesculap quality down to the last detail.

The electronic controller controls the power flow from battery to machine. When more power is needed, the controller automatically increases the performance and lowers it if necessary. This optimises battery life and ensures the quality of the shearing remains consistently good.

Using a brushless direct current motor (EC motor) has the advantage of less heat development, leading to longer battery service life and thus longer overall service life for the clipper. The lack of carbon brushes therefore provides a practically wear-free drive.

- ideal for clipping the tails of sheep or for shearing cattle with wool-like coats
- huge pulling power, like a cable-operated sheep clipper
- high shearing speed, glides perfectly through the coat
- low weight, fatigue-free handling
- electronic push button recessed in the housing means no more accidental switching the machine on or off when handling
- powerful EC motor
- very well balanced
- powerful and long-lasting
- lithium technology so no memory effect
- effortlessly achieves 2700 rpm
- Aesculap cutting plates from the Made in Germany Econom series

Intelligent battery technology: provides just enough power that's needed and switches to "standby" mode after 1 h of inactivity (increases the lifespan of the battery).

technical data

Clipping head system:	Shearing blade set
Drive:	DC motor, approx. 2,700 strokes/min

Scratch Brush HAPPYCOW MiniSwing

for calves and goats

The HAPPYCOW MiniSwing cleaning machine rotates in any direction and almost every angle. The vertical pendulum brush reaches almost any body part, head and rump especially are thoroughly cleaned.

The HAPPYCOW MiniSwing scratch brush is suitable for calves from 3 months of age and adult goats. One brush is designed for max. 60 calves or max. 50 goats.

The HAPPYCOW MiniSwing is automatically activated for approx. 60 seconds by slightly lifting the brush from the animals. The changing direction of the brush after ever activation ensures even wear of the brushes. The torque safety shutdown stops the brush when it encounters too much resistance, ensuring safety in the stable.

technical data	
Voltage:	230 V, 50 / 60 Hz

AniScale Animal Scale

This animal scale with cradle stand is ideal for weighing large animals. The animals can easily be put into the cage and held for the weighing procedure. The animal scale can be integrated into trap systems or races.

The scale stand
• weighing platform with rubber mat • animals are safe, noise-dampening • extra robust design • hot-dip galvanised • with 2 sliding doors, in front and behind • incl. 2 panels each 240 cm • easy to integrate in palisade trap systems or races

The weighing set

• robust scale beams are mounted below the cage • handles on the scale beams for easy carrying and placement • display with handy carry handle • with LED display • with battery, operating time per charge approx. 30 hours • includes charger • stand for display optionally available

Functions:
• stabilisation function, determines the weight of moving animals • tare function • sum possible

The complete set consists of stand and scale set.
To combine the animal scale with a trap system, please use the connector frame so as not to distort the weighing result.

Collar Number Duo

- effortless attachment and removal thanks to two-part design • optimised recognisability thanks to handy colour code, double-sided labelling and large format (54 x 59 mm) • suitable for neck marking straps up to 40 mm wide
- patent applied for

Major work relief
The Collar Numbers Duo are a huge help, especially if there are livestock changes. Conventional collar numbers must be pushed from the collar which, due to dirt and soiling, is no longer possible or extremely difficult after even just a short period of use. In some circumstances, complete dismantling of the collar, including equipment such as transponders, sensors or weights, is required even though only one number needs to be changed. By contrast, the Collar Numbers Duo can be opened, removed and inserted in the required position easily. With tethered animals, they can be even be fitted without removing the collar.

Optimum recognisability
The special colour coding (one colour for each number) and large format make animal recognition much easier, especially at long distances, with partially concealed digits or in poor lighting conditions. Thanks to the double-sided labelling and colour coding, even twisted collars are no longer a problem.

Grain Moisture Meter TwistGrain

- unique electric 3-point measurement of moisture with test pressing
- TwistGrain is programmed for many crops: wheat, rye, barley, triticale, oats, rapeseed, maize etc.
- the audio signal in the screw cap confirms if the test sample has been pressed sufficiently hard
- precise measurement of whole grains of many plant types
- the measurement result can be read in bright sunlight as well as the dark thanks to the graphic display with backlight and high contrast, as well as a wide viewing angle
- glass-fibre reinforced screw cap and housing made from shakeproof material (ABS) ensure your device is extremely strong
- fast and easy to use - ideal for working in the field
- you can measure grain moisture in seconds with a very small device that weighs just 0.5 kg
- dimensions: 16.5 x 7 x 7.5 cm
- 2-year guarantee

The set includes:
- DRAMINSKI Twist Grain moisture meter with cap
- carrying pouch
- carrying strap for the pouch to hang up the device
- incl. 4 alkali-manganese batteries, type AA, 1.5 V
- incl. 1 battery, type CR2032, 3 V (in the cap)
- includes operating instructions

ref. no.	⬚	€

Grain-Moisture Level Reader GrainMaster GMSV2

with grinder

The grain is ground and pressed using special grinding plated integrated into the measuring cell, which ensures a high level of reliability and reproducibility of the obtained results
- GrainMaster is programmed for the following crops: wheat, rye, barley, triticale, oats, rapeseed, maize. Other cereals can be retrofitted.
- USB interface for software and calibration update
- graphic LCD display (2") LED backlit display
- sample volume: 10 ml

Accuracy:
± 1.0 % in the range of up to 10 % moisture content
± 1.2 % in the range of over 10 % moisture content

Control for LED Lighting

This lighting control allows you to switch the artificial stable lighting on or off, on a timer and regardless of existing daylight, or even achieve a constant light level (e.g. min. 200 lux) through automatic dimming. This means it ensures ideal lighting conditions throughout the day and year while minimising electricity consumption. Comfort for animals and humans!

• controls lighting dependent on time and/or daylight • four different lighting circuits (groups) can be independently controlled, two of which with a dimming function • suitable for LED lights with 1...10V interface • standard surface-mount housing for mounting in the equipment room • dust and moisture protection (IP54) • maximum switching power of 11kW • suitable e.g. for up to 50 150 watt lights (up to 15 lights on the dimmable circuits 1 and 2, and up to 10 lights on circuits 3 and 4) • supplied with a light sensor (can request up to four light sensors) • input for up to four button signals • easy to use with display and three buttons • easy to install by your electric company • with extensive documentation and terminal description

Pflanzenschutzzone

cit Mite-ExSil Mite Powder Spray*

The latest development in the war against poultry red mite and other parasites in stables!

• simple application • silicon dioxide attacks the wax layer on mites, causing them to dessicate and die • aerosol spray allows the active ingredient to be applied accurately and especially in all corners and cracks • spray jet leaves behind a white layer of powder on sprayed areas. This means it is easy to check when and where applications need to be repeated • especially effective at combating poultry red mite, other types of poultry mite, fleas and ticks

ref. no.	content		€	active agent
15448	500 ml	1/12		Amorphous silicone dioxide
				Pyrethrin + pyrethroids

DiaCarid *

combats red fowl mites and crawling insects

• an effective pesticide to combat red fowl mites and crawling insects • effectively repels crawling bugs such as mites, ants, silverfish and woodlice • a fine powder made of fossilised plankton is also effective in damp air • the mites' protective wax film is destroyed on direct contact with DiaCarid. The pests are therefore instantly demobilised and dry out • the special structure makes it impossible to build up resistance • spread DiaCarid in the places where mites and other crawling insects hide • amount to use 4 g/m² (enclosure)

Automatic Chicken Door

The automatic chicken door allows the flaps, doors or sliders in poultry stalls to be automatically opened and closed.

The automatic chicken door has various functions for opening and closing the slider:
• daylight-dependent control with light sensor
• time-dependent control, can differentiate between weekdays and weekends
• manual control, on the unit or via connected switch

The automatic chicken door is fitted with safety features. A time delay on the light signal prevents unwanted opening during lightning. If the slider encounters resistance by an animal when closing, the process is stopped and then repeated.

Included in scope of delivery: control with integrated motor and cable, AC adapter, batteries, light sensor, pulley set, instruction manual

Mechanic Glove Helios

The Lightweight One

Extremely good fit and low weight for optimal comfort. The glove for precision work.

• 0.5 mm ultra-thin but still durable synthetic material for precision work • fully encompassed with Lycra for complete freedom of movement and comfort – the glove feels like a second skin • honeycomb silicone matrix on the fingers and palms for optimal grip • exposed points on the back of the hand reinforced with silicone • conductive finger tips so you can still use touch screens
